

Data Center Solutions

High-density panels and cassettes for your network today and tomorrow

The data center is the foundation of your network operation...

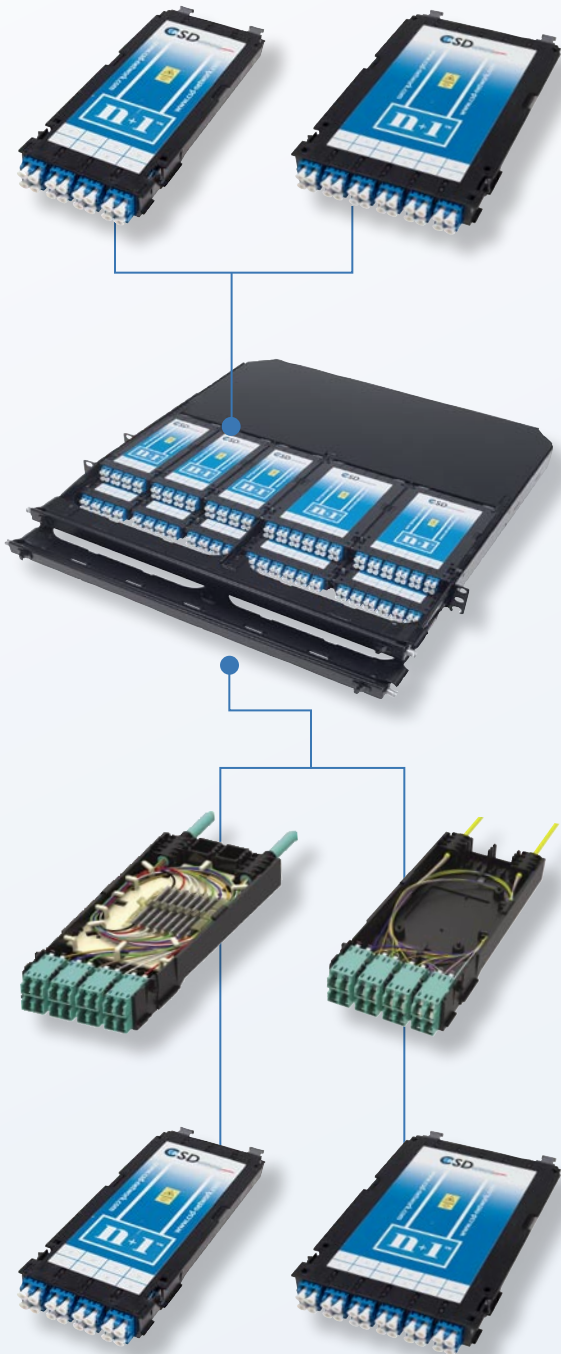

The n+1™ high density fiber optic housings and cassettes from Connectivity Solutions Direct are the cornerstone of that network foundation. The n+1 platform is a modular solution for multiple application spaces, capable of deploying 96 ports per 1RU. That's a 33% increase in port density when compared to conventional high-density systems. CSD provides customers with a unique collection of products that deliver port density, quality, versatility and simplicity in a cost-effective solution.

The CSD n+1 platform supports a full range of network topologies including Base-8, Base-12, Base-16, and Base-24 MPO trunks. The unique n+1 platform maintains industry leading port density of 96 per RU for simplex SC, duplex LC and MPO ports. Available in 1RU, 2RU and 4RU housings, the platform's modular design enables easy migration to and from duplex to parallel connectivity, even allowing both within a common housing if desired. The n+1 housing is engineered with efficiency in mind. Its cable management system enables cassette trays to slide in and out for easy installation and access.

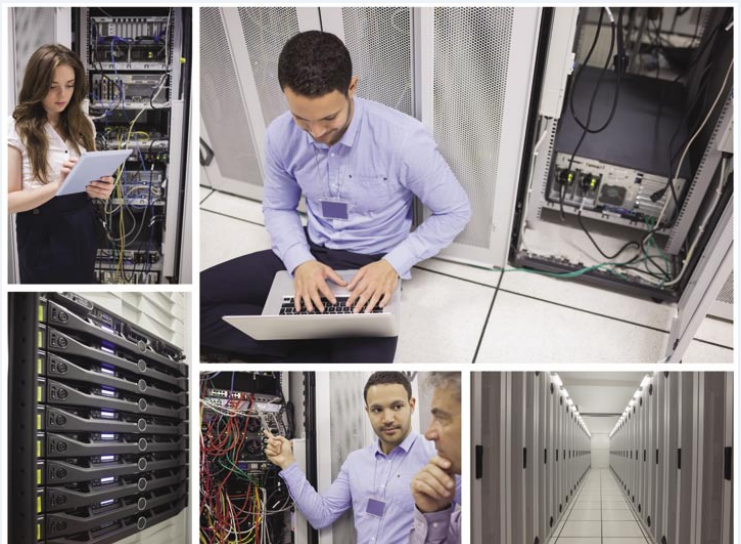

Density:	Versatility:	Simplicity:
<ul style="list-style-type: none"> • 1RU = 96 ports • 2RU = 192 ports • 4RU = 384 ports 	<ul style="list-style-type: none"> • Reconfigurable housing • Independently installed cassettes • Interchangeable adapters • Compatible with all 19" racks 	<ul style="list-style-type: none"> • Efficient user configurable front and rear cable management • Fast and easy installation • Hinged front door & removable back cover

Data Center Solutions

Two interchangeable cassettes serve as the building blocks for the CSD n+1 platform. The modular design provides flexibility and functionality without sacrificing density. 8 and 12 port cassettes can be deployed within the same n+1 housing, and even on the same internal tray without any reduction in port density. These unique cassettes feature interchangeable adapters and internal components allowing cassettes to be configured for Conversion, Patching, Splicing, Taps, Splitters or Fanouts. CSD's n+1 platform features standards-based cabling and n+1 internal cassette polarity. The same cassette is used at both ends of the link; cassette or patch cord flipping is not required.

CSD's designs emphasize cable management throughout. Our intuitive cable routing features make it fast and easy to complete a professional installation. Regardless of whether your cable needs are conventional or custom, CSD offers a large compliment of cable, trunk, array and patch cord assemblies to meet your needs.

Data Center Solutions

Connectivity Solutions Direct offers a full line of standards-based connectivity products that support your daily business with a wide range of fiber, cable and connector types. From patch cables, trunks and arrays to fiber cassettes and patch panels, CSD provides reliable high-performance solutions to meet your growing network requirements. The CSD n+1 platform is ideal for wholesalers, contractors, network providers and owners, because it allows you to configure your network for your application, rather than having to settle for what everyone else is selling. We specialize in custom designs, and our technical and engineering teams are available to support you in your design efforts.
